Specification

The examiner has not checked the specification to the extent necessary to determine the presence of **all** possible minor errors (grammatical, typographical and idiomatic). Cooperation of the applicant(s) is requested in correcting any errors of which applicant(s) may become aware of in the specification, in the claims and in any future amendment(s) that applicant(s) may file.

Applicant(s) is also requested to complete the status of any copending applications referred to in the specification by their Attorney Docket Number or Application Serial Number, **if any**.

The status of the parent application(s) and/or any other application(s) cross-referenced to this application, **if any**, should be updated in a timely manner.

Election/Restriction

Applicant's election with traverse of Group I, claims 1 and 3-9, in the reply filed on February 17, 2009 is acknowledged. The traversal is on the ground(s) that there is no evidence that DMC catalysts having an average particle size of 0.1 micron are known. This is not found persuasive because US 2003/0013604 discloses DMC catalysts wherein 90% of the particles preferably have a particle size in the range from 0.1 microns to 20 microns. Such recitation is considered substantially similar to and inclusive of an average particle size as claimed.

Regarding the decision in the European Patent office finding the composition to be novel and nonobvious, it is pointed out that different reasoning and procedures take place in other offices. The USPTO is not bound by the findings. Further, applicant has

elected the process of making the composition. Therefore, as long as the examiner considers the composition to be anticipated or obvious over prior art of record in this application, the holding of a lack of unity stands. The requirement is still deemed proper and is therefore made FINAL.

Allowable Subject Matter

Claims 1 and 2-9 are allowable over the prior art of record. The herein claimed process for making DMC catalyst particles of small particle size is distinctly different from the prior art processes which employed grinding, spray-drying and freeze-drying.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

This application is in condition for allowance except for the following formal matters:

The presence of non-elected claims 10 and 12-20.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 25 USPQ 74, 453 O.G. 213, (Comm'r Pat. 1935).

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.
